MAIN PROJECT REPORT GUIDELINES

Front-End UI Design and Development (Angular)

Each group must prepare a professional main project report for its assigned Angular project. Each group consists of four members, and individual contributions must be clearly documented.

1. Required Report Sections

- Cover Page – Project title, institution name, all four members' names, roll numbers, trainer name and submission date.
- Abstract
- Introduction and Problem Statement
- Project Objectives and Scope
- Existing System and Proposed System
- Software and Hardware Requirements
- System Architecture Diagram
- System Design – Use-case diagram, workflow diagram and component hierarchy.
- Technology Stack – Angular, TypeScript, HTML, CSS, RxJS and other technologies used.
- Module Description – Responsibilities and features of all four members.
- Implementation – Important code snippets with explanations.
- UI Screenshots – Actual application screens with captions.
- Testing – Test cases, expected results, actual results and pass/fail status.
- Challenges Faced and Solutions
- Results and Discussion
- Conclusion and Future Enhancements
- References
- Individual Contribution Report

2. Report Formatting

- Paper size: A4
- Body font: Times New Roman, 12 pt
- Chapter headings: 16 pt, bold
- Line spacing: 1.5
- Text alignment: Justified
- Suggested report length: 35–60 pages, depending on project complexity and institutional requirements.

3. Final Submission Requirements

- Project report in PDF and editable Word formats.
- Complete Angular source code.
- README file with project setup and execution instructions.
- Architecture and design diagrams.
- Application screenshots and testing report.

- Individual contribution details for all four members.
- Project presentation and live demonstration.

4. Important Instructions

- Every group must submit one integrated project developed collaboratively by all four members.
- Each member must have clearly defined responsibilities and must be able to explain their own code during the individual viva.
- Include only actual implementation details, genuine test results and screenshots of the working application.
- Maintain proper code organization, meaningful naming conventions and professional documentation.
- Follow any additional report format prescribed by the institution.

All groups must follow these guidelines while preparing the main project report.
